

Are you on the path
to becoming a data
scientist?

How would you
employ AI in your
projects?

Angelo Castillo Pérez
Ingeniero Industrial | Data Analyst

1

Generate real life data using various techniques while maintaining user privacy

2

Write elegant and efficient code to implement your models and analyses.

3

Product prototyping by implementing rapid prototyping tools to create models and interactive visualizations to show users and get feedback.

4

Learn new programming languages, skills, frameworks, and concepts continuously.

5

Create better reports for non-technical stakeholders in a clear and concise manner.

6

Creation of automation scripts to save time, simplifying repetitive tasks and avoiding human errors.

Will AI replace data scientists, analysts or engineers?

The answer is "NO". Perhaps in the distant future, but still, we will have different jobs, more creative and more decision-making. With the development of AI, we will also grow!
